

What is the Global Private Cloud Network?

GPCN is a global private cloud platform delivering on-demand access to private CPU, GPU and storage through a consumption-based model from Tier 3+ data centers.

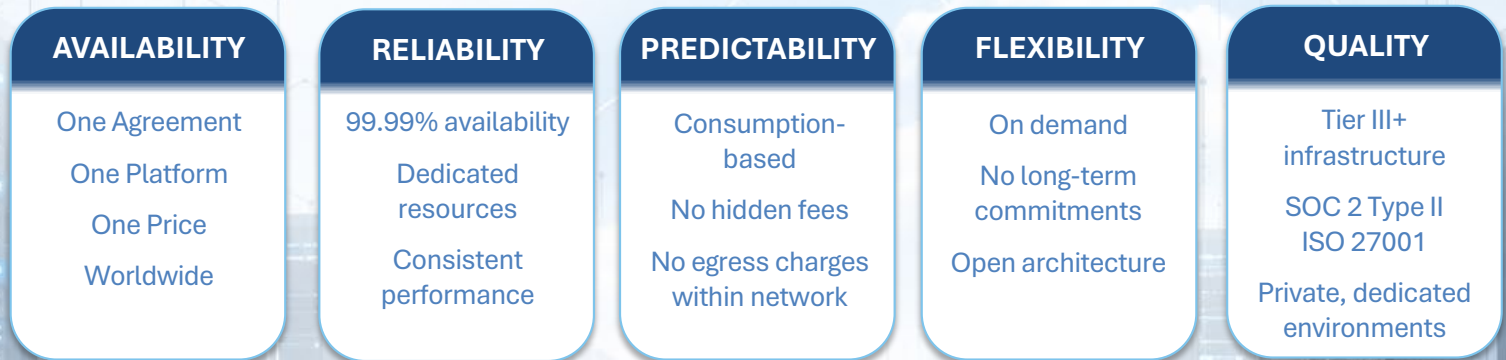

Organizations gain all the advantages of private compute, delivered through a globally scalable platform with the utility and economics historically associated with public cloud.

- **Dedicated private virtual infrastructure**
- **On-demand, Consumption-based**
- **Global footprint with local availability**
- **No term, financial or technical commitments**
- **ISO 27001 & SOC 2 Type II compliant**
- **No egress fees in network**
- **99.99% availability**

Why organizations choose the Global Private Cloud Network

A modern global private cloud platform built around the capabilities enterprises value most

Global Availability

30+ Data Centers
26+ Cities
10+ Countries

A resilient network across global partners, designed to help enterprises place workloads closer to users, data and regulatory requirements.

Business Outcomes

- **Lower TCO**
Reduce total infrastructure costs, including data transfer and egress fees
- **More Control**
Dedicated private environments with strong governance
- **Eliminate Lock-In**
No term commitments or technical traps
- **Faster Time to Value**
Provision private resources in minutes, not months
- **Enable AI at Scale**
Support enterprise AI without infrastructure constraints
- **Enterprise Resilience**
Built for uptime and business continuity
