

A Private, Cost-Controlled Platform for SAP Overflow, Non-Production, DR, and Extension Workloads

Reduce the infrastructure cost and operational burden surrounding SAP without disrupting the SAP core.

Why SAP Customers Are Re-Evaluating Infrastructure:

- SAP's transition to S/4HANA is dramatically increasing compute footprint and infrastructure costs
- "Clean core" strategies are creating more side-by-side applications, integrations, analytics, and data services outside the ERP core
- Non-production, DR, migration, and testing environments continue to expand while remaining expensive to maintain
- Many organizations want alternatives to automatically placing SAP-adjacent workloads into AWS or Azure

GPCN provides a private cloud platform for the infrastructure surrounding SAP, enabling customers to run adjacent workloads more flexibly, privately, and cost-effectively.

Non-Production Environments

Dev, QA, testing, sandbox, training, migration rehearsal

Disaster Recovery & Business Continuity

Secondary environments, replicated data zones, DR testing

Data & Analytics Offload

Historical reporting, ETL, archives, warm/cold data

Extensions & Integrations

APIs, middleware, AI/ML, workflow engines, side-by-side applications

Migration & Transformation Projects

S/4HANA assessments, parallel runs, temporary project infrastructure

GPCN helps make SAP infrastructure more economically and operationally sustainable.

Private Infrastructure Without Hyperscaler Dependency

A secure private cloud option for SAP-adjacent workloads without forcing AWS/Azure lock-in.

Consumption-Based Economics

Scale infrastructure up or down without long-term overprovisioning or permanent infrastructure commitments.

SAP-Certified Compute

GPCN provides SAP-certified compute, including large-scale 400+ core environments.

Rapid Provisioning & Operational Flexibility

Quickly deploy temporary, overflow, project-based, and secondary SAP environments globally.

Enterprise-Grade Security & Control

Private networking, governance, data control, and enterprise-grade infrastructure aligned to regulated environments.

Services & Partner Ecosystem

GPCN is supported by a growing ecosystem of infrastructure, consulting, migration, and managed services partners that help customers:

- Assess SAP-adjacent workload placement
- Reduce dependency on traditional SAP infrastructure models
- Support migration, DR, testing, and transformation initiatives
- Architect secure private cloud operating models around SAP
